CONFIDENTIAL · COMPANY PROFILE

Alehu AI P.L.C.

Smart Child Safety Systems — pioneering next-generation AI safety for children.

Alehu AI Public Limited Company is an innovative technology venture dedicated to protecting children through intelligent, real-time edge monitoring. Our proprietary smart gadget combines non-intrusive wearable hardware with advanced AI to deliver instant safety alerts to parents and guardians.

Mission

To develop innovative child-safety solutions that combine smart devices, artificial intelligence, and real-time monitoring to help parents protect their children and enable timely responses to potential safety incidents, without compromising their freedom.

Vision

To create a world where every child is safer and every parent can have greater peace of mind through intelligent, accessible technology — and to become a globally trusted leader in smart child protection technology.

Strategic metrics

Metric	Target / claim
Alert latency	Under 1.2 seconds
AI detection accuracy	99.4%
Active protection	24/7
Telemetry	100% encrypted

Core value pillars

- **Proactive protection:** shift from passive tracking to on-device threat assessment powered by edge AI.
- **Privacy first:** zero raw audio or image storage. Local inference keeps children’s data private.
- **Seamless utility:** long battery life, water-resistant child-proof design, intuitive guardian controls.

The Alehu ecosystem

The flagship suite integrates smart wearable sensors, localized edge computing, and cloud intelligence to form an unbroken safety umbrella around children in urban, school, and outdoor environments.

Layer	Role
Smart gadget wearable	Biometrics and geo-sensors on the child
On-device edge AI	Acoustic and motion analysis without cloud lag
Parent / school app	Instant alerts and live GPS for guardians
Cloud API (this MVP)	Accounts, devices, alerts, encrypted telemetry

Product modules

Module	Benefit
Distress Acoustic AI	Immediate local trigger on scream, impact, or distress keyword
Smart geofencing	Early wander-off warning with predictive route deviation
Impact and fall detection	Automated accident alert from IMU patterns
Silent SOS	Hidden double-press button for discreet emergencies
Extended battery	Up to 5 days of active life
Adaptive context awareness	Learns routine to cut false alarms
Multi-guardian mesh	Broadcasts to parents, school staff, or local security

Go-to-market

Initial deployment targets urban parents, primary schools, and daycare centers through direct-to-consumer online channels and strategic B2B educational partnerships. R&D; horizon: vital-sign telemetry, biometric wellness, and cellular mesh for remote areas.

Leadership

Role	Focus
Hilina Mulugeta — CEO	Vision, product direction, corporate strategy, growth
Kaleab Mulugeta — AI & Hardware	Firmware, embedded systems, on-device AI
Gashaw Taye — Mobile & Cloud	Apps, secure backends, real-time notifications
